Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

PATDOCTC@fr.com

Application No. Applicant(s) 10/826,947 PINTO ET AL. Office Action Summary Examiner Art Unit TEJAL J. GAMI 2121 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS. WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 11 January 2010. 2a) ☐ This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1-28 is/are pending in the application. 4a) Of the above claim(s) _____ is/are withdrawn from consideration. 5) Claim(s) _____ is/are allowed. 6) Claim(s) 1-28 is/are rejected. 7) Claim(s) _____ is/are objected to. 8) Claim(s) _____ are subject to restriction and/or election requirement. Application Papers 9) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are; a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abevance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of: Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received.

Application/Control Number: 10/826,947 Page 2

Art Unit: 2121

DETAILED ACTION

1. This office action is responsive to a REQUEST FOR CONTINUED

EXAMINATION entered January 11, 2010 for the patent application 10/826947.

Status of Claims

2. Claims 1-28 were rejected in the last Office Action dated July 10, 2009.

As a response to the July 10, 2009 office action, Applicant has Amended claims 1 and 6.

Claims 1-28 are now presented for examination in this office action.

Claim Objections

Claim 6 is objected to because of the following informalities:

Claim 6. Line 7-8: Appears to be missing step (b).

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2121

 Claims 1-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Lazarus et al. (U.S. Patent Number: 6,430,539)

As to independent claim 1, Lazarus discloses a machine-base method comprising:

in connection with a project (e.g., predictive modeling of consumer financial behavior) (see Abstract), selecting a first subset of historical data about a system being modeled (e.g., certain merchants in a segment; and Figure 9 for segment 1, segment 2, ...segment M) (see Col. 37, Lines 54-65) for use in generating a tentative predictive model for the system (e.g. predictive model generation system) (see Figure 9; and Col. 16, Lines 4-5; and Col. 31, Lines 12-29), the first subset of historical data comprising less than all of the historical data (e.g., historical spending in the cluster) (see Col. 4, Lines 11-16);

selecting a process for developing a predictive model for the system from among multiple possible model development processes (e.g., highest correlation with the segment vector, highest average transaction amount, or other selective criteria) (see Table 13; and Col. 37. Lines 54-65):

applying the selected model development process to the first subset of historical data to generate the tentative predictive model (e.g., segment models) (see Table 13 and Col. 38, Lines 23-38);

selecting a second subset of the historical data (e.g., certain merchants in a segment; and Figure 9 for segment 1, segment 2, ...segment M) (see Col. 37, Lines 54-65), the second subset (e.g., each segment) being less than all of the historical data

Art Unit: 2121

and being at least a portion of a complementary dataset of the first subset (e.g., overlapped segments) or being randomly selected from the historical data and independent of the first subset (see Col. 38, Lines 24-53);

applying the tentative predictive model (e.g., segment models) to the selected second subset (e.g., overlapped segments) (see Col. 38, Lines 24-53), determining whether results of applying the tentative predictive model to the selected second subset validate that the selected model development process will produce a final predictive model that is accurate for data that is not part of the historical data (e.g., generate lift charts for the targeting population in the segment, and for overlapped combined segments) (see Col. 38, Lines 24-53), if the selected model development process is so validated (e.g., lift chart useful for validating the performance of the predictive models) (see Col. 34, Lines 20-23), then applying the validated model development process to a full set of historical data that includes the first and second subsets generate a final predictive model (e.g. segment models may be merged to produce a single lift chart) (see Col. 38, Lines 37-39), and using the final predictive model (e.g., target promotional offers) (see Figure 3).

As to independent claim 6, Lazarus discloses a machine-based method comprising:

in connection with a project (e.g., predictive modeling of consumer financial behavior) (see Abstract), selecting a model development process from multiple model development processes to apply on a first subset of less than all of a set of historical data to generate a first tentative predictive model (e.g., highest correlation with the

Art Unit: 2121

segment vector, highest average transaction amount, or other selective criteria) (see Table 13; and Col. 37, Lines 54-65), applying the selected model development process including

a) automatically transforming variables of the subset of the historical data (e.g., variables) (see Col. 11, Lines 13-23),

automatically generating the first tentative predictive model (e.g., segment models) (see Table 13 and Col. 38, Lines 23-38), and

 c) automatically generating performance measures of the first tentative predictive model (e.g., confirm model performance) (see Col. 4, Lines 25-26),

determining a validity of the selected development process based on the performance measures of the first predictive model (e.g., validation and analysis of the segment predictive models done to confirm model performance) (see Col. 11, Lines 21-23);

applying the validated model development process (e.g., lift chart useful for validating the performance of the predictive models) (see Col. 34, Lines 20-23; and Col. 38, Lines 23-38) to a full set of historical data (e.g., based on historical data) (see Col. 4, Lines 11-16) that includes the subset (e.g., certain merchants in a segment; and Figure 9 for segment 1, segment 2, ...segment M) (see Col. 37, Lines 54-65) to generate a second (e.g., overlapped segments) (see Col. 38, Lines 24-53), final model (e.g. segment models may be merged to produce a single lift chart) (see Col. 38, Lines 37-39), and using the final predictive model (e.g., target promotional offers) (see Figure 3).

Art Unit: 2121

As to dependent claim 2, Lazarus teaches the method of claim 1 also including displaying on a user interface project goals to enable the user to assess performance of the project (see Figures 7a and 7b), wherein the project goals comprise at least one of:

cumulative lift over an interval of interest, degree of monotonicity, or concordance scores (e.g., cumulative lift time interval) (see Col. 11, Lines 16-25; and Col. 34, Lines 20-64).

As to dependent claim 3, Lazarus teaches the method of claim 2 also including identifying that the tentative predictive model does not produce at least a predefined degree of lift for at least one of the subsets (e.g., lift rank) (see Col. 35, Lines 14-23).

As to dependent claim 4, Lazarus teaches the method of claim 3 also including enabling a user to choose interactively at least one model development criterion (e.g., selective criteria) change or transformation or interaction of variables to improve a fit of the predictive model (e.g., highest correlation) (see Col. 5, Lines 46-49; and Col. 37, Lines 49-65).

As to dependent claim 5, Lazarus teaches the method of claim 4 also including graphically displaying and comparing measures of performance for the validation dataset and the training dataset (e.g., validation to confirm model performance) (see Col. 4, Lines 20-26).

As to dependent claim 7, Lazarus teaches the method of claim 6 also including generating measures of the performance of the predictive model for the at least two

Art Unit: 2121

datasets (e.g., clusters/segments), the performance measures being generated separately percentile by percentile (e.g., percentile ranking) (see Col. 35, Lines 49-55).

As to dependent claim 8, Lazarus teaches the method of claim 6 also including graphically displaying and comparing measures of the performance for at least two datasets (e.g., ranking) (see Col. 34, Lines 21-23; and Col. 35, Lines 49-55).

As to dependent claim 9, Lazarus teaches the method of claim 6 also including persistently storing the validated model development process and a validated model for computing propensities for at least one target outcome variable, the propensities serving as indices of a score for non-historical data (see Col. 35, Lines 49-55).

As to dependent claim 10, Lazarus teaches the method of claim 6 also including providing a user interface (e.g., lift chart; models) (see Col. 34, Lines 20-64; and Col. 35, Lines 32-38) for assessing project goals against performance (e.g., goal) (see Col. 1, Lines 35-37).

As to dependent claim 11, Lazarus teaches the method of claim 6 also including providing a user interface for selecting at least one subset of the historical data in addition to a training subset (see Col. 4, Lines 20-25).

As to dependent claim 12, Lazarus teaches the method of claim 6 providing a user interface for displaying the performance of the first predictive model for at least two subsets of the historical data for an interval of interest (e.g., time interval) (see Col. 4, Lines 16-26).

As to dependent claim 13, Lazarus teaches the method of claim 6 enabling a user to choose interactively (e.g., selective criteria) at least one transformation or

Art Unit: 2121

interaction of variables to improve the model development process (e.g., highest correlation) (see Col. 5, Lines 46-49; and Col. 37, Lines 49-65).

As to dependent claim 14, Lazarus teaches the method of claim 6 also including cross-validating the final model using random portions of the historical data (e.g., cross-segment) (see Col. 11, Lines 8-23).

As to dependent claim 15, Lazarus teaches the method of claim 6 providing a user interface that enables the user to select at least one validation dataset and invoke a process for validating the model development process (e.g., selective criteria) (see Col. 37, Lines 49-65).

As to dependent claim 16, Lazarus teaches the method of claim 6 providing a user interface that enables the user to point and click to cause display of information about the validation of the model development process (e.g., computer) (see Col. 6, Lines 41-67).

As to dependent claim 17, Lazarus teaches the method of claim 16 in which the information about the validation of the model development process includes at least one of:

a statistical report card (e.g., statistical information) (see Col. 3, Lines 50-54) with a link to the statistical report chart (e.g., statistical model) (see Col. 4, Lines 25-28), a cumulative lift chart with a link to the cumulative lift chart, and a non-cumulative lift chart with a link to the non-cumulative lift chart (e.g., cumulative lift chart) (see Col. 34, Lines 20-50).

Art Unit: 2121

As to dependent claim 18, Lazarus teaches the method of claim 17 in which invocation of the link to the statistical report card (e.g. statistical information) (see Col. 3, Lines 50-54) causes display of the statistics of the validation of the model development process (e.g., validation of statistical model) (see Col. 4, Lines 25-28).

As to dependent claim 19, Lazarus teaches the method of claim 17 in which invocation of the link to the cumulative lift chart causes display of a cumulative lift chart (e.g., cumulative lift chart) (see Col. 34, Lines 20-50).

As to dependent claim 20, Lazarus teaches the method of claim 17 in which invocation of the link to the cumulative lift chart causes display of a non-cumulative lift chart (e.g., segment lift chart) (see Col. 34, Lines 20-50).

As to dependent claim 21, Lazarus teaches the method of claim 17 in which a user is enabled to choose interactively at least one performance criterion (e.g., selective criteria) change or transformation or interaction of variables to improve the model development process (e.g., highest correlation) (see Col. 5, Lines 46-49; and Col. 37, Lines 49-65).

As to dependent claim 22, Lazarus teaches the method of claim 6 also including providing a user interface that enables the user to select at least one machine automated model development process applied to the entire set of the historical data for the validated model development process (e.g., selective criteria) (see Col. 37, Lines 49-65).

As to dependent claim 23, Lazarus teaches the method of claim 6 also including providing a user interface that enables the user to point and click to cause

Art Unit: 2121

display of information about the performance of the validated model development process applied to the entire set of historical data (e.g., computer) (see Col. 6, Lines 41-67).

As to dependent claim 24, Lazarus teaches the method of claim 23 in which the information about the performance of the first model for two independent datasets includes at least one of the following:

a statistical report card (e.g. statistical information) (see Col. 3, Lines 50-54) with a link to the statistical report chart (e.g., statistical model) (see Col. 4, Lines 25-28), a cumulative lift chart with a link to the cumulative lift chart, a non-cumulative lift chart with a link to the non-cumulative lift chart (e.g., cumulative lift chart) (see Col. 34, Lines 20-50).

As to dependent claim 25, Lazarus teaches the method of claim 24 in which the invocation of the link to the statistical report card (e.g. statistical information) (see Col. 3, Lines 50-54) causes display of the statistics of the validation of the model development process (e.g., validation of statistical model) (see Col. 4, Lines 25-28).

As to dependent claim 26, Lazarus teaches the method of claim 24 in which the invocation of the link to the cumulative lift chart causes display of a cumulative lift chart (e.g., cumulative lift chart) (see Col. 34, Lines 20-50).

As to dependent claim 27, Lazarus teaches the method of claim 24 in which the invocation of the link to the cumulative lift chart causes display of a non-cumulative lift chart (e.g., segment lift chart) (see Col. 34, Lines 20-50).

Art Unit: 2121

As to dependent claim 28, Lazarus teaches the method of claim 6 also including storing the final model and validation results of the model development process persistently (e.g., stored in databases) (see Col. 6, Lines 41-67).

Response to Arguments

6. Applicant's amendment and arguments filed January 11, 2010 have been fully considered. The amendment does not overcome the original art rejection and the arguments are not persuasive. The following are the Examiner's observations in regard thereto.

Applicant Argues:

There is nothing in the figure 5 or text passages of Lazarus cited by the examiner that suggested that merchant vectors are less than all of the historical data, as now recited in the applicant's claim 1.

Examiner Responds:

Examiner is not persuaded. See office action above for prior art anticipation of this newly presented claim limitation. See particularly the prior art Abstract where "merchant vectors representing specific merchants are clustered to form merchant segments;" and see Figure 9 for segments 1 to M. Because there are numerous clusters and segments, a single cluster or segment is less than all.

Applicant Argues:

The cited passages did not describe and would not have made obvious a <u>selection of a model development process</u>, which would be <u>validated</u> based on a subset of the historical data, but rather simply a selection of a target audience to which to apply a

Art Unit: 2121

model. Lazarus described his lift chart as being used to validate just the accuracy of the models, not the accuracy and generalizability of the model development process.

Examiner Responds:

Examiner is not persuaded. According to applicant's independent claim 6 where "validating the selected development process" is "based on the performance measures of the predictive model," see prior art Col. 34, Lines 20-23 for a lift chart useful for validating the performance of the predictive models. Also see prior art Table 13 and Col. 37, Lines 54-65 for examples of model development processes, such as, "highest correlation with the segment vector, highest average transaction amount, or other selective criteria." Under such considerations, the prior art anticipates validating the selected development process based on the performance measures of the predictive model.

Conclusion

 Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tejal J. Gami whose telephone number is (571) 270-1035. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Albert DeCady can be reached on (571) 272-3819. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
